Bilateral Meetings

- (13.00 pm - 18.00 pm)

Description

Our mission is to reduce the quantity of mixed municipal waste by increasing the degree of waste sorting and preventing its generation. By 2020, we aim to become the leader in the field of innovative waste management technology and facilities, helping to reduce the quantity of mixed municipal waste and prevent waste generation. We focus on biodegradable waste minimisation. Our solutions have made an impact on more than 500,000 individuals and we partner over 450 municipalities in the Czech Republic, Slovakia, and Hungary. One of the most effective methods of waste prevention is the support of home composting. We spread this idea especially through our cooperation with municipalities as a supplier of products, as well as a provider of technology and information campaigns whose aim is to support biodegradable waste prevention. We also operate the biggest e-shops selling composters and complementary goods in Slovakia, the Czech Republic, and Hungary. Thanks to our solutions - in 2014 and 2015 - 360 municipalities from Slovakia, Czech Republic and Hungary managed to prevent the emission of 7 846 307 kg CO₂. It comes from prevention of biodegradable waste from landfills in the amount of 125 666 580 litres per year.

Organization Type

Sales, Distributors, Company

Organization Size

1-10

Founding Year

2015

Offer

Solution for food & kitchen waste

We offer a new, innovative and environment-friendly technology to process food and kitchen waste on the place of its origin. These machines can turn any kind of organic waste (meat & bones included) to rich and quality compost (natural fertilizer) within 24 hours.

The device is available in 7 different sizes, capacity is between 5,5 kg and 1,5 tons of food/kitchen waste per day.

We offer the equipment and complex solution to decrease the amount of waste and to decrease the costs related to waste collection.
