Offer

Aerosol cans and Food cans

We offer packaging materials for food and household products.

AEROSOLS

We manufacture three-piece necked-in aerosol cans, made of tinplate. The technical dimensions are in conformity with the FEA 214 Standard. According to the customer's requirements the internal surface and the components can be lacquered inside-outside, while the lithography on the body can be printed in photo quality. Since the cans are containers under pressure, the hermetic seaming is essential. In order to ensure higher safety, beside the manual water bath, we installed and operate high pressure leak testing units from Bonfiglioli at the end of each lines. The aerosol cans are made with 12 and 15 bar deformation pressure and for request we are able to produce with 18 bar, too. We are having 4 production lines at the moment on which we are able to provide the cans in 49 mm, 52 mm, 57 mm and 65 mm diameters. Aerosol cans are widely used for packing cosmetics, household chemicals, whipped cream, automotive products, paints and other technical aerosols.

FOOD CANS

The three-piece round tinplate cans are ideal for packaging a wide range of foods for a variety of eating occasions. Our food cans are used for packing mostly green peas and sweet corn, with the highest level of hygiene and durability. Compatible with both standard and easy-open ends. As a manufacturer of food packaging materials, it was imperative that Pikopack Ltd. align itself with the needs of the food industry, with the HACCP system ensure safety for its customers and most importantly, the ultimate consumer of the canned food.

BPA-free packaging

Pikopack is pleased to provide BPA-free packaging, as our goal is to provide the best packaging material to our customers. Many companies have been switched their canning to BPA-free (bisphenol-A) cans recently. Thanks to our developments we could follow the new trend - BPA free cans are available too.
